Type II Micro-Surfacing Aggregate Specifications

The North Dakota Department of Transportation (NDDOT) will operate four VSS Minimac Microsurfacing machines for pavement preservation in order to preserve our existing roadway network. The State reserves the right to award contracts which optimize equipment usage and minimize mix designs and recalibration.

Type II Micro-Surfacing aggregate samples must be submitted to the NDDOT by your company for initial material testing and mix design analysis. The NDDOT and suppliers will work together to determine which composition of materials will work in the Minimac without complications.

Awarded aggregate suppliers will provide sufficient sample material, initially a five gallon container, to allow design development. Each aggregate source will require sampling for design. Working with the NDDOT District Materials Coordinators and using the site specific material, the emulsion supplier will develop a mix design. The design and testing must be completed in a timely manner to allow for the availability of materials for the upcoming maintenance season. It is estimated that a minimum of two weeks will be required to develop each design.

Aggregate Properties

The mineral aggregate used shall be of the type and grade specified below for Micro-Surfacing. The aggregate shall be manufactured crushed stone such as granite, slag, limestone, chat or other high quality aggregate or combination thereof. The aggregate shall meet the following gradation:

SIEVE SIZE	TYPE II - % PASSING
3/8"	100
#4	90-100
#8	65-90
#16	45-70
#30	30-50
#50	18-30
#100	10-21
#200	5-15

Aggregate Physical Requirements

Grading - The aggregate including natural fines shall meet the referenced gradation requirements when tested by AASHTO methods T11 or ASTM C117 or C136.

Deleterious Substances - To limit the permissible amount of clay-like fines in an aggregate a sand equivalency of 65 or higher is required when tested by ASTM 2419.

Soundness - The aggregate shall have a weighted loss of not more than 15% when the sodium sulfate test is used or not more than 20% when the magnesium sulfate test is used.

Hardness - The aggregate wear from abrasion resistance shall be a maximum of 35% when using AASHTO T96 or ASTM C131 test methods.

The proposed pit location(s) shall be identified by legal description in the response.

Bidder _____

Supply locations and Estimated Quantity

The awarded contractor for this bid will supply to North Dakota as indicated in the Bid Response.

It is estimated that approximately **1,110 tons** of Type II Micro-Surfacing aggregate will be used during the 2017 construction season in these areas. The quantities of materials specified herein are estimates based on the expected scope of operation. Actual amount ordered may vary. Please provide pricing for all districts in the bid response whether or not a quantity is indicated.

Delivery of Aggregate Material

When contacted by the District Materials Coordinator, the aggregate supplier will pull two five gallon samples from the specified aggregate site. One five gallon sample will be delivered to the District Materials Coordinator. The second sample will be shipped by the aggregate supplier to the specified emulsion supplier.

If a successful mix design cannot be achieved with the initial emulsion supplier or in order to create an alternate mix design for the identified pit, the aggregate supplier may be required to provide samples to a second emulsion supplier.

The samples must be pulled and shipped in a timely manner. Sample containers can be obtained from the NDDOT District for this purpose.

The address of the emulsion suppliers will be provided by the Materials Coordinator when a sample is requested. The aggregate supplier will be responsible for the cost and shipment of the aggregate sample.

For production purposes the Type II Micro-Surfacing aggregate shall be delivered as needed to the ordering NDDOT district maintenance yard. All material delivered to the NDDOT for use as Micro-Surfacing aggregate shall be taken from the same pit source originally used for the mix design in order to ensure compatibility with the asphalt emulsion. The NDDOT reserves the right to sample and test all materials to ensure conformance to the specifications.
